

Step 1 - Download & Install the Software

- On your iOS device (Iphone or Ipad), open Safari and go to the official link:
<http://mps-prnt-p1.ad.utah.edu:9163/client-setup/known-host/ios.html>
- Tap the link provided on that page to be redirected to the correct version of the Mobility Print app in the App Store. Make sure you are on a campus network or VPN when using Mobility Print.
- **Important:** Do not search and install "Mobility Print" directly from the App Store. You must use the link from the page above (our copier setup page), as it includes pre-configured settings specific to the University of Utah.
- Download and install the Mobility Print app by PaperCut Software from the redirected link.

Step 2 - Launch & Configure

- Open the setting app on your device, install the PaperCut Mobility Print for iOS
- When prompted, allow necessary permissions (e.g., local network access, notifications).
- The printer will now be added to your available printer list and usable from any print-compatible app
- Make sure to use a campus network or VPN when using this app

Step 3 - Print your Document

- Open the document, photo, email, or webpage you wish to print.
- Tap the Share button (the box with an upward arrow), then select Print.
- Under Printer Selection, choose: RedPrintMobilityPrint[MPS-PRNT-P1]

Important:

- Before printing, tap on Paper Size and select either Letter (8.5"x11") or 11x17". Other paper sizes are not supported and may result in failed jobs.
- If prompted again, re-enter your credentials.
- Tap Print to send the job to the RedPrint system.
- Use the instructions on the following pages to badge into the copier and release the print job.
